## COMPUTER SKILLS

- Flutter & Dart (Advanced with 2 years of experience)

## WORK EXPERIENCES

- Korfes Software and Technology (Intern)
- Korfes Software and Technology (Junior Flutter Flutter)

## PROJECTS

- **Flutter**

- Tencere: It is personal project. Tencere allows people to earn money by cooking from their homes and selling them. People who buy these dishes will also enjoy healthy and cheap home-cooked meals thanks to Tencere.

The project consists of five different applications:

Tencere: The app that buyers use to buy homemade food.

Tencere – Cook: The app that sellers use to create their own menus.

Tencere – Courier: Application that couriers use to track order status and deliver orders.

Tencere – Admin: Application that administrators use to manage the platform.

Tencere – Assistant: The application in which the employees in charge manage the platform with certain access restrictions.

Courier, Admin and Assistant are the apps that only people with permission can download. You can find the download links of the other two apps, Tencere and Tencere – Cook, below.

- Linksports: I developed this application for the company I worked for full time. Linksports is a mobile application that helps football clubs around the world discover children with high football skills, waiting to be discovered, in poor countries or poor cities. I coded the app using Flutter. For the first months I worked alone on the project and set up the basic software architecture, completed most of the features. Then, as the project grew, new developers joined the team. You can reach the latest version of the application from the url below.
